## BUILT-UP ROOFING SYSTEMS

### Your choice

A tradition of *performance* and *protection*

For nearly a century, EMCO has been one of Canada's largest and most respected roofing materials manufacturers. In fact BP products have been protecting homes and businesses in Canada and the United States since 1904. More than simply a supplier of quality roofing products, EMCO is committed to providing reliable, problem-free roofing performance that satisfies your needs now and far into the future.

Whether you are installing a new roof or repairing / replacing an existing roof, a BP Integrated Built-Up Roofing System provides the high performance, perfect compatibility and complete protection to suit any roof size or design.

### Your quality

BP's Integrated Built-Up Roofing Systems withstand the tests of time and weather because the individual components are built for maximum compatibility, strength and durability.

**Burfalt™**, the BP-brand asphalt used as the waterproofing and bonding agent, is available in a variety of EVT ranges.

**BP perforated felt** is a high-quality asphalt saturated felt made with the best organic mat, saturated with superior grade asphalt. This felt is used in the construction of built-up roofing membranes.

**BP wood fibre roof insulation** is a uniform density product composed of interlocking fibres impregnated with a water-repellant petroleum paraffin emulsion. This time-proven, stable substrate is a preferred choice for its excellent insulation properties or to bond membranes.

*Durability, strength, flexibility and compatibility*

durability
